Things of the past

Elektor is now & tomorrow

Secure a head start in electronics
with a **subscription!**

Advantages to subscribers

**FREE 3-in-1 welcome
gift: 2GB MP3 player,
USB Stick and
Voice Recorder**

- Cheaper than 11 issues from the newsstand
- With every issue subscribers get up to **40% discount** on selected Elektor products
- As a welcome gift you get a free **2GB MP3 player** worth £31.50
- No queues, travelling, parking fees or 'sold out' Elektor is supplied to your doorstep every month
- Always up to date – read your copy before everyone else

Electronics

The 30x Circuits Series

The 30x series of Summer Circuit compilation books have been bestsellers for many years. You can use these books not only for building the circuits described, but also as a treasure trove of ideas or circuit adaptations for your own experiments. Many readers have found in these books that new approach, new concept, or new circuit they were looking for.

Among many other inspiring topics, the following categories are well presented in these books: test & measurement; RF (radio); computers & peripherals; audio & video; hobby & modelling; microcontrollers; home & garden; power supplies & battery chargers; etcetera.

310 Circuits

ISBN 978-0-905705-78-1

Microcontroller Basics

Microcontrollers have become an indispensable part of modern electronics. They make things possible that vastly exceed what could be done previously. Innumerable applications show that almost nothing is impossible. There's thus every reason to learn more about them. This book offers more than just a basic introduction. It clearly explains the technology using various microcontroller circuits and programs written in several different programming languages. In the course of the book, the reader gradually develops increased competence in converting his or her ideas into microcontroller circuitry.

ISBN 978-0-905705-67-5 | 230 pages | £19.95 | US \$32.20

PIC Microcontrollers

50 Projects for Beginners and Experts

This hands-on book covers a series of exciting and fun projects with PIC microcontrollers. You can build more than 50 projects for your own use. The clear explanations, schematics, and pictures of each project on a breadboard make this a fun activity. You can also use this book as a study guide. The technical background information in each project explains why the project is set up the way it is, including the use of datasheets. Even after you've built all the projects this book will still be a valuable reference guide to keep next to your PC.

ISBN 978-0-905705-70-5 | 446 pages | £27.95 | US \$45.10

Universal Display Book for PIC Microcontrollers

This book begins with simple programs to flash LEDs, and eventually by stages to use other display indicators such as the 7-segment display and alphanumeric liquid crystal displays. As the reader progresses through the book, bigger and upgraded PIC chips are introduced, with full circuit diagrams and source code, both in assembler and C. In addition, a small tutorial is included using the MPLAB programming environment, together with the EAGLE schematic and PCB design package to enable readers to create their own designs using the book's many case studies as working examples to work from.

ISBN 978-0-905705-73-6 | 192 pages | £23.00 | US \$37.10

Robotics

Computer Vision Principles and Practice

Computer vision is probably the most exciting branch of image processing, and the number of applications in robotics, automation technology and quality control is constantly increasing. Unfortunately entering this research area is, as yet, not simple. Those who are interested must first go through a lot of books, publications and software libraries. With this book, however, the first step is easy. The theoretically founded content is understandable and is supplemented by many practical examples.

ISBN 978-0-905705-71-2 | 320 pages | £32.00 | US \$51.70

Programming

Visual Basic for Electronics Engineering Applications

5.0, 6.0, VBA, .NET, 2005

This book is targeted towards those people that want to control existing or self-built hardware from their computer. After familiarizing yourself with Visual Basic, its development environment and the toolset it offers are discussed in detail. Each topic is accompanied by clear, ready to run code, and where necessary, schematics are provided that will get your projects up to speed in no time.

ISBN 978-0-905705-68-2 | 476 pages | £29.95 | US \$48.40

Microcontroller Systems Engineering

45 projects for PIC, AVR and ARM

Flowcode is one of the world's most advanced graphical programming languages for microcontrollers. This book covers a series of exciting and fun Flowcode projects. You can build the projects for your own use. Or you can use the book as a study guide to learn more about microcontroller systems engineering and the PIC, AVR and ARM microcontrollers. The book starts very simply with a tutorial project and step-by-step instructions. As you go along the projects increase in difficulty and the new concepts are explained. Each project has a clear description of both hardware and software with pictures and diagrams, which explain not just how things are done but also why.

ISBN 978-0-905705-75-0 | 320 pages | £29.00 | US \$46.80

PC Interfaces under Windows

Measurement and control using standard ports

PC Interfaces can be used for more than just the printer, mouse, modem and joy-stick! While it was relatively easy to directly access PC interfaces using a DOS computer, under Windows things are not all that simple. This book shows you how it can be done. The authors describe the DIY construction and programming of a number of highly interesting circuits.

ISBN 978-0-905705-65-1 | 265 pages | £27.95 | US \$45.10

Mouse Interfacing with USB and PS/2

The mouse is one of the best proven, widely used and inexpensive man-machine interfaces ever devised, yet its presence in the world of embedded systems is still a rarity. This book describes in-depth how to connect the mouse into new embedded applications. It details the two main interface methods, PS/2 and USB, and offers applications guidance with hardware and software examples plus tips on interfacing the mouse to typical microcontrollers. If you need to interface an embedded system to a mouse (PS/2 or USB), then this book will prove an invaluable tool. A wealth of clear illustrations enhance this highly readable text.

ISBN 978-0-905705-74-3 | 230 pages | £26.50 | US \$42.80

Design your own Embedded Linux control centre on a PC

This book covers a do-it-yourself system made from recycled components. The main system described in this book reuses an old PC, a wireless mains outlet with three switches and one controller, and a USB webcam. All this is linked together by Linux. The book will serve up the basics of setting up a Linux environment – including a software development environment – so it can be used as a control centre. The book will also guide you through the necessary setup and configuration of a webserver, which will be the interface to your very own home control centre.

ISBN 978-0-905705-72-9 | 234 pages | £24.00 | US \$38.80

Faultfinding in Computers and Digital Circuits Testing and Measuring

Modern electronic equipment is characterized by the predominance of digital techniques, high clock rates and complexity. This applies not only to specialized equipment such as microprocessor systems, microcontrollers and "industrial" PCs, but also to consumer items such as personal computers, multimedia devices, digital television and so on. The knowledge and technical skills needed to put such equipment into service, and to maintain it in good working order, go beyond the level of simple self-help tips and basic measurements. The object of this book is to help the reader to acquire this knowledge and understanding.

ISBN 978-0-905705-60-6 | 627 pages | £31.15 | US \$62.30

SOLD OUT

Audio

Build your own Audio Valve Amplifiers

To many people, the thermionic valve or electron tube is history. However, whether it is nostalgia, interest in the technical parameters, the appeal of a gleaming amplifier chassis with softly glowing valves or perhaps the firm conviction that the sound of a valve cannot be bettered, it is a fact that the valve is making a come-back. This book contains, apart from construction projects for preamplifiers, power amplifiers, and amplifiers for musical instruments, information on the operation of electron tubes, while the first chapter gives a short history of the valve.

ISBN 978-0-905705-39-2 | 253 pages | £15.55 | US \$25.10

Modern High-end Valve Amplifiers based on toroidal output transformers

Valve amplifiers are regarded by many to be the ne plus ultra when it comes to processing audio signals. The combination of classical technology and modern components has resulted in a revival of the valve amplifier. The use of toroidal-core output transformers, developed by the author (Menno van der Veen) over the past 15 years, has contributed to this revival. The most remarkable features of these transformers are their extremely wide frequency ranges and their very low levels of linear and nonlinear distortion. This book explains the whys and wherefores of toroidal output transformers at various technical levels and offers innovative solutions for achieving perfect audio quality. Do-it-yourself builders, as well as persons who want to gain a deeper technical understanding of the complex world of audio transformers, valve amplifiers and audio signal processing, will find this book a rich and useful source of information.

ISBN 978-0-905705-63-7 | 264 pages | £27.95 | US \$45.10

Designing Audio Circuits

How does speech, music, or, indeed, any sound get from the CD to the loudspeaker? This is a question that many people keep on asking and to which this book endeavours to give a comprehensible answer. Understanding the background of the process is a first requirement, which is why the author in the description of single components makes clear what exactly happens in the component. Designing circuits is well nigh impossible without an understanding of the various networks involved in the conversion of the input sound to the sound emanating from a loudspeaker. To this end, the author describes four important basic circuits using an operational amplifier, a component without which modern audio circuits can no longer be imagined. Building circuits, including ancillary and special ones, forms the practical parts of this book.

ISBN 978-0-905705-50-7 | 350 pages | £20.75 | US \$33.50

DISTANCE LEARNING COURSE

NEW

Programming Embedded PIC Microcontrollers

→ using Assembly, C and Flowcode

In this course you will learn how to program an embedded microcontroller.

We will start with the absolute basics and we will go into a lot of detail.

You cannot learn about software without understanding the hardware so we will also take a close look at the components and schematics.

At the end of the course you will be able to design your own embedded applications and write the appropriate software for it.

Contents:

- Background
- Digital Ports
- Serial Communication (RS232)
- Analog Signals
- Pulse Width Modulation
- Timers/Counters/Interrupts
- Memory
- LCD Display
- I²C Communication
- SPI Communication
- USB Communication
- Configuration (Fuses)
- Answers to the assignments
- Appendix

Your course package:

- Courseware Ring Binder (800 pages)
- CD-ROM including software and example files
- Application Board
- Support at Elektor Forum
- Elektor Certificate

Price: £395.00 / \$645.00 / €445.00

Please note: to be able to follow this course, E-blocks hardware is required which you may already have (in part). All relevant products are available individually but also as a set at a discounted price. Please check www.elektor.com/distancelearning for further information.

Further information and ordering at
www.elektor.com/distancelearning

Elektor Volumes on CD-ROM/DVD-ROM

The Elektor Annual CD-ROMs:

- All articles published in Elektor in pdf format
- Produce hard copy of PCB layouts at printer resolution
- Adapt PCB layouts using your favourite graphics program
- Zoom in / out on selected PCB areas
- Ideal companion for science projects, GCSE, etc.
- Export circuit diagrams and illustrations to other programs (ideal for science projects)
- HTML overview for MacOS and Linux users

Elektor 2007

Elektor 1990-1999 on DVD-ROM

Elektor 1990 through 1999 10 full volumes on DVD

Elektor wants to inspire its readers to enjoy electronics and computer technology, by presenting professionally designed circuits that are easy to build, and by describing the latest developments in electronics and technical information science.

This DVD-ROM contains the full range of 1990-1999 volumes (all 110 issues) of Elektor magazine. The more than 2,100 separate articles have been classified chronologically by their dates of publication (month/year), but are also listed alphabetically by topic. A comprehensive index enables you to search the entire DVD.

The DVD also contains (free of charge) the entire 'The Elektor Datasheet Collection 1-5' CD-ROM series, with the original full datasheets of semiconductors, memory ICs, microcontrollers, and much more.

ISBN 978-0-905705-76-7 | £69.00 | US \$111.30

Audio Collection

| 11

The Audio Collection I

More than 75 audio circuits from the 1995-1999 volumes of Elektor magazine. Highlights includes the surround-sound decoder, compact amp, sampling rate converter, battery powered preamplifier and Titan 2000. Using the included Acrobat Reader you are able to browse the articles on your computer, as well as print texts, circuit diagrams and PCB layouts.

ISBN 978-90-5381-121-4 | £12.90 | US \$20.90

The Audio Collection II

A unique CD-ROM for the true audio lover, containing no fewer than 75 audio designs from the 2000-2004 volumes of Elektor magazine. The articles on the CD-ROM cover test & measurement equipment, amplifiers, digital audio and loudspeaker technology. Highlights include the Crescendo Millennium Edition, Audio-DAC 2000, Audio-ADC 2000 and the IR-S/PDIF Transmitter and Receiver. Using the included Acrobat Reader you are able to browse the articles on your computer, as well as print texts, circuit diagrams and PCB layouts.

ISBN 978-90-5381-176-4 | £12.90 | US \$20.90

Electronics

FPGA Course

In 9 chapters

FPGAs have established a firm position in the modern electronics designer's toolkit. Until recently, these 'super components' were practically reserved for specialists in high-tech companies. The nine lessons on this courseware CD-ROM are a step by step guide to the world of Field Programmable Gate Array technology. Subjects covered include not just digital logic and bus systems but also building an FPGA webserver, a 4-channel multimeter and a USB controller. The CD also contains PCB layout files in pdf format, a Quartus manual, project software and various supplementary instructions.

ISBN 978-90-5381-225-9 | £14.50 | US \$23.40

Robotics

actuators & sensors mechanical & electronic design

In Robotics, electronics meets information technology as well as mechanical engineering. The meeting results in a boundless experimental field. Do you want to explore it? For beginners the shortest way is along the kits line, while experienced users and programmers are best served by DIY construction. Both options are available on this CD-ROM thanks to a large collection of datasheets, software tools, tips en tricks, addresses, Internet links to assorted robot constructions and general technical information. All aspects of modern robotics are covered, from sensors to motors, mechanical parts to microcontrollers, not forgetting matching programming tools and libraries for signal processing. Robots built from LEGO® bricks also get a fair amount of attention.

ISBN 978-90-5381-179-5 | £12.90 | US \$20.90

Home Automation

This CD-ROM provides an overview of what manufacturers offer today in the field of Home Networking, both wired and wireless. The CD-ROM contains specifications, standards and protocols of commercially available bus and network systems. For developers, there are datasheets of specific components and various items with application data. End-users and hobbyists will find ready-made applications that can be used immediately. The documents included on the CD-ROM have been classified according to communication media: mains (power line), coaxial cable, telephone line and wireless (RF).

ISBN 978-90-5381-195-5 | £13.90 | US \$22.50

Ethernet Toolbox

Software Tools & Hardware Tips

This CD-ROM contains all essential information regarding Ethernet interfaces! To help you learn about the Ethernet interfaces, we have compiled a collection of all articles on this topic that have appeared in Elektor magazine and complemented them with additional documentation and links to introductory articles on Ethernet interfaces. It includes a collection of data sheets for dedicated Ethernet interface ICs from many different manufacturers. The CD-ROM provides a wealth of information about connectors and components for the physical layer (PHY) and specific software tools for use with the Ethernet (Software).

ISBN 978-90-5381-214-3 | £19.50 | US \$31.50

USB Toolbox

Embedded USB Know How

This CD-ROM contains technical data about the USB interface. It also includes a large collection of data sheets for specific USB components from a wide range of manufacturers. There are two ways to incorporate a USB interface in a microcontroller circuit: add a USB controller to an existing circuit, or use a microcontroller with an integrated USB interface. Included on this CD-ROM are USB Basic Facts, several useful design tools for hardware and software, and all Elektor articles on the subject of USB.

ISBN 978-90-5381-212-9 | £19.90 | US \$32.10

ECD 5

Elektor's Components Database

The program package consists of eight databanks covering ICs, germanium and silicon transistors, FETs, diodes, thyristors, triacs and optocouplers. A further eleven applications cover the calculation of, for example, LED series droppers, zener diode series resistors, voltage regulators and AMVs. A colour band decoder is included for determining resistor and inductor values.

ECD 5 gives instant access to data on more than 69,000 components. All databank applications are fully interactive, allowing the user to add, edit and complete component data.

ISBN 978-90-5381-159-7 | £24.90 | US \$40.20

E-blocks

E-blocks are small circuit boards each of which contains a block of electronics that you would typically find in an electronic system. As each E-blocks module is 'complete' in itself, you are able to concentrate on the main issues.

Our range of more than 43 hardware circuit blocks, CD-ROMs, sensors and a host of accessories and support materials, means that whatever you want to make, you can make it with E-blocks.

If you are a beginner then we suggest you start with one of our E-blocks Starter Kits. These have everything you need for your first project.

Starter Kit Professional for PIC

Flowcode 4 for PIC	£177.00
USB Multiprogrammer	£75.00

Remote Control by Mobile Phone

(November 2008)

Remote control using mobile phones and SMS (Text Messaging) is in great demand but many systems on sale suffer from imperfections. This ingenious design combines powerful capabilities with low technical overheads. It has programmable AC mains switching outlets plus status reports by text message and alarm-activated delivery of GPS data.

Kit of parts, incl. PCB, programmed controller and all parts

Art. # 080324-71 | £55.80 | US \$90.00

Communicating with CAN

(October 2008)

The CAN (Controller Area Network) protocol is now over 20 years old, but it's still frequently used these days. It was specially designed for use in environments where you have a lot of electromagnetic interference. Despite the fact that the CAN protocol is a serial protocol, it can't just be connected to (the serial port of) a computer. This all-round USB-CAN adapter is a compact and simple solution. With the help of the accompanying software you can follow all data communications taking place and carry out operations such as filtering and storage at the flick of a (mouse) switch.

PCB, partly populated

Art. # 071120-71 | £55.80 | US \$90.00

DCC Command Station

(September 2008)

Electronics is making more and more inroads into the domain of model trains. Trains are now controlled with digital codes, and in many cases the entire system can be operated from a computer. Elektor presents a design for the device that forms the heart of a digitally controlled model railway: the DCC Command Station. The computing power in this design is provided by a high-performance ARM7 processor.

Kit of parts incl. programmed ARM module

Art. # 070989-71

£88.50 | US \$142.80

Elektor Internet Radio

(April 2008)

In the good old days, you had to modulate audio signals onto an RF carrier so they could be received and demodulated to produce something more or less audible. Nowadays things are different: audio signals are compressed and put into IP packets that are 'streamed', and you can access every Internet radio programme in the world by receiving, buffering and decompressing these packages. This is all very easy with the Elektor Internet Radio. State-of-the-art hardware and all open-source!

PCB, SMD-populated

Art. # 071081-71 | £129.90 | US \$209.60

Data Logger "deLuxe"

(March 2008)

We have had the pleasure of proposing various data acquisition units over the last few years. This Datalogger "deLuxe" is a nice exercise in product development. It actually utilises an SD card as the media for data storage. The hardware design is compact and that makes the firmware and software features even more interesting.

Kit of parts incl. PCB, programmed controller and display

Art. # 070745-71 | £76.20 | US \$122.90

DigiButler

(May & April 2008)

A low-cost home automation server based on a Freescale Coldfire 32-bit microcontroller. The project has been designed with open source in mind and doubles as a powerful Coldfire development system using free CodeWarrior software from Freescale. DigiButler activates electrical appliances in and around the home, accepting on/off commands from a WAP phone, through an Ethernet network or via a webpage at an allocated IP address and with full access security.

Kit of parts including SMD-stuffed PCB, programmed micro-controller, all leaded parts and CD-ROM containing both Elektor articles, TBLCF documentation, datasheets, application notes and source code files

Art. # 071102-71 | £32.00 | US \$51.70

ECIO PLC

(March 2008)

This ECIO PLC board is suitable for quite complex control and automation projects. An ECIO acts as the brains of the board that has relays, opto-isolators, CAN (!) connectivity and an LCD. All this I/O capacity together with Flowcode allows the board to act as a versatile, powerful PLC. The LCD module is used to display ASCII characters to the user as a means of troubleshooting during the software development stage or for monitoring the system.

Kit of parts incl. PCB, ECIO-module and all other components

Art. # 070786-71 | £84.00 | US \$135.50

**USB Flash Board**

(November 2007)

Flash microcontrollers are easy to program. In the past, program code was usually downloaded via a serial interface, but nowadays many PCs (especially laptops) only have USB ports. This versatile Flash Board provides a solution to this problem. It is built around an AT89C5131A, which is an extended 8051-family microcontroller with an 80C52 core and a Full Speed USB port. As a sort of bonus, the IC has a complete update interface for downloading new firmware. Atmel also provides suitable software in the form of its FLIP program, which is available free of charge.

Kit of parts incl. PCB and all components

Art. # 070125-71 | £39.90 | US \$64.40

**CO₂ Measurement**

(January 2008)

Carbon dioxide (CO₂) is not just a threat to the environment, it is also an important and often ignored factor in determining air quality in the office and at home. Too high a concentration of CO₂ leads to feelings of tiredness, disturbs concentration, and causes headaches. The Elektor CO₂ meter makes it easy to determine the concentration of carbon dioxide in the air. A micro-controller monitors the measured value and can trigger an alarm or start up a ventilation system when a preset threshold is exceeded.

Kit of parts incl. PCB, Sensor PCB, ATtiny26 and display

Art. # 070802-71 | £107.50 | US \$215.00

USBprog

(October 2007)

A new microcontroller, and yet another new programmer? Anyone involved with microcontrollers today will have a drawerful of printed circuit boards and adaptors for programming various devices. Enter USBprog, which can replace all those with a single unit. As a bonus, it can even be used as a generalpurpose USB I/O port and RS-232 adaptor.

PCB, SMD populated plus other parts

Art. # 060224-71 | £25.00 | US \$40.40

4-Channel Logic Analyser

(September 2007)

A logic analyser is indispensable to unravel the time relation between logic signals in a circuit. This instrument is compact and battery-powered. Sampling speed is 2 MHz and sufficient memory is available to store 1024 samples of the measured signal. Logic signals can be viewed on a 64x128 graphic LCD.

Kit of parts incl. PCB, programmed controller, display, case and all parts

Art. # 060092-71 | £87.50 | US \$141.20

PIC In-Circuit Debugger/Programmer

(October 2006)

PIC microcontrollers of the 8-bit 16F and 18F family can be found in many devices. A must for users is a means of loading programs and an In-Circuit Debugger (ICD) for tracking down programming errors. This project addresses both of these needs and is not only substantially compatible with Microchip technology's ICD2 module but also significantly cheaper.

Kit of parts incl. PCB, programmed microcontroller and all parts

Art. # 050348-71 | £40.40 | US \$65.20

Modules

Elektor SMT Oven

(October 2008)

The Elektor SMT reflow oven will faithfully handle most if not all your soldering of projects using surface mount devices (SMDs). The oven is particularly suited for use not just in Colleges, workshops, clubs and R&D laboratories, but also by the advanced electronics enthusiast. This precious workbench tool is at home where SMD boards have to be produced to a variety of requirements on size, components and soldering materials.

- Selected, tested & certified by Elektor
- Including Elektor-produced user manual
- Fully menu controlled
- Ideal for R&D laboratories, schools, small companies and ... electronic enthusiasts
- Product support from Elektor Customer Services

Art. # 080663-91 | £962.00 | US \$1665.00

Demo video on
www.elektor.com/smtoven

SAPS-400

(June 2008)

The switch-mode power supply unit (SMPSU) is renowned for its efficiency but notorious for its design complexity, compared with its predecessor the linear supply. With the SAPS-400 we offer a powerful, adjustable symmetrical supply that's ideal for lightweight audio power amplifiers and happily sits in less than a quarter of the space taken by a comparable supply of conventional design.

PCB, populated and tested, ready-mounted in aluminium U profile

Art. # 070688-91 | £165.00 | US \$266.20

The ATM18 project

(April 2008)

ATM18 was developed jointly by Elektor and Computer:club2 (www.cczwei.de). Each month, the latest developments and applications of the ATM18 system are presented by Wolfgang Rudolph of Computer:club2 in a TV broadcast on the German NRW-TV network. Elektor is pleased to support the project through articles in the magazine, ready-stuffed boards supplied through the Elektor Shop, supplementary information, software downloads and the forum at www.elektor.com.

The series of articles presents a tiny processor module based on an ATmega88 microcontroller, ideal for use at the heart of any number of different projects. We begin with a reaction time tester and quickly move on to more advanced projects such as a precision weather station and a 3D magnetometer.

SMD-populated board with all cables (USB AVR Programmer)

Art. # 080083-71 | £25.00 | US \$40.40

*PCB, partly populated
(ATM18 Controller module)*

Art. # 071035-91

£9.50 | US \$15.40

*PCB, partly populated
(ATM18-Testboard)*

Art. # 071035-92

£29.90 | US \$48.30

PROJECTS MICROCONTROLLERS

Display Computer

M16C mini board with graphics, programmable in C and Basic

The prices of graphic displays are dropping, which makes them increasingly attractive for many applications. However, programming a graphic display is distinctly more difficult than programming a text display. Our mini microcontroller board features a new display-on-glass module and a high-performance Renesas M16C microcontroller. The board is available fully assembled, and the microcontroller is pre-loaded with a TinyBasic interpreter to simplify the development of graphics applications – even for novices.

Dr. Uwe Ahlberg

There are numerous applications for a small-size microcontroller board with a graphic display. Unfortunately, this is not possible in most basic microcontroller applications.

However, during the display and programming process, the microcontroller is pre-loaded with a TinyBasic interpreter to simplify the development of graphics applications – even for novices.

Display Computer

(May 2008)

Programming a graphic display is distinctly more difficult than programming a text display. Our mini microcontroller board features a new display-on-glass module and a high-performance Renesas M16C microcontroller. The board is available fully assembled, and the microcontroller is pre-loaded with a TinyBasic interpreter to simplify the development of graphics applications – even for novices.

Populated PCB

Art. # 070827-91 | £79.90 | US \$128.90

Modules

ElekTrack

(October 2007)

Position determination is all the rage. The manufacturer of the well-known TomTom navigation system has become a publicly traded company, and the alarm systems of expensive cars and other vehicles often positioning systems so they can report where the vehicle is located. However, such systems are rather expensive, so we decided to take the DIY approach and develop our own version, dubbed ElekTrack.

PCB, ready assembled and tested GPS/GSM-antenna, cable and case

Art. # 040161-91 | £249.00 | US \$401.70

Stand Alone OBD-2 Analyser

(June 2007)

This handy analyser makes a simple job of rummaging through the information stored by the client-accessible part of your car's computer. It works with all current OBD-2 protocols and can read and erase trouble codes stored in the vehicle and reset the MIL display. All this without the help of a PC or a visit to a service station.

PCB, ready-assembled and tested (case and OBD-2 cable included)

Art. # 070038-93 | £68.50 | US \$110.50

Software Defined Radio

(May 2007)

SD radio receivers use a bare minimum of hardware, relying instead on their software capabilities. The Elektor SDR project (by Burkhard Kainka) demonstrates what's achievable, in this case a multi-purpose receiver covering all bands from 150 kHz to 30 MHz. It's been optimised for receiving DRM and AM broadcasts but is also suitable for listening in to the world of amateur transmissions.

Ready-populated and tested board

Art. # 070039-91 | £86.50 | US \$139.60

Modules

USB Stick with ARM and RS232

(November 2006)

This neat stand-alone memory stick can store or transfer data from a microcontroller system in the field to a PC using its built-in USB and RS232 ports. Add to that an LCD and the simple to use data-logging mode is just the icing on the cake!

Assembled and tested board

Art. # 060006-91 | £79.90 | US \$149.95

GameBoy Electrocardiogram (GBECG)

(October 2006)

Lots of electronics hobbyist dream of recording an electrocardiogram (ECG) using a circuit built at home. Usually out of technical curiosity, as numerous problems have to be resolved in order to properly sample the heart's electrical activity. Alternatively, some people require personal medical monitoring while under a cardiologist's care. And then it's great to be able to make your own ECG and show it to your GP or clinical staff.

PCB, ready built and tested

Art. # 050280-91 | £55.20 | US \$110.40

Elektor RFID Reader

(September 2006)

RFID cards are becoming increasingly popular in many fields where previously barcodes and chip cards were used. This programmable RFID reader can both read from and write to all types of RFID card that are compatible with the MIFARE and ISO 14443-A international standards.

Ready-built and tested PCB with USB port for connection to the PC. Including USB cable; not including display and enclosure.

Art. # 060132-91 | £44.90 | US \$72.50

LC display

Art. # 030451-72 | £11.00 | US \$17.80

Matching enclosure

Art. # 060132-71 | £9.50 | US \$15.40

Modules

A 16-bit Tom Thumb
(February 2006)

R8C Starter Kit comprising CD-ROM and R8C/13 microcontroller board with SIL pinheaders supplied separately.

Art. # 050179-91 | £10.90 | US \$17.60

Application Board for R8C/13
(March 2006)

The 'base camp' for the R8C/13 microcontroller module. With 2 x serial I/O, USB, LCD, LED's, analogue I/P, PSU and reset and MODE control.

PCB, ready-assembled and tested
Art. # 050179-92 | £57.00 | US \$92.00

Micro Webserver
(July/August 2004)

The Elektor Micro Webserver is a full-fledged node for Internet traffic, despite its quite modest dimensions and complexity. It consists of a microcontroller board with a network interface. Thanks to its compact construction and the versatility of the micro-controller board, the Micro Webserver is an ideal choice for measurement and control applications.

Ready-assembled and tested MSC1210 Board
Art. # 030060-91 | £87.50 | US \$141.20

Ready-assembled and tested Network Extension Board
Art. # 044026-91 | £52.10 | US \$84.10

COMBINED PACKAGE

**MSC1210 board +
network extension +
software +
all related Elektor articles**

£117.50 | US \$189.60
Art. # 044026-92

Elektor PCB Service

NEW!

➔ Your professional
PCBs and Prototypes

Elektor PCB Service is intended for prototype builders and designers who want to have their PCBs made to professional standards, and for users who want customised versions of Elektor PCBs. If you need a couple of 'protos' with fast turnaround or a batch of 5 to 50 units, we can meet your needs at a favourable price.

The advantages at a glance

- No film charges or start-up charges.
- There is no minimum order quantity or charge for this service.
- Available to private and commercial customers.
- We'll first check if your project is producible. We'll let you know within 4 hours!
- In order to supply two PCBs, we make three. If the third board is also good, you receive it as well – free of charge.
- No surprises from the online price calculator
- You can use our online payment module to pay easily, quickly and securely with Visa or MasterCard.

Procedure:

1. Create your account
2. Place your order
3. Your project is checked
4. Payment
5. Your order is shipped

Now available for everybody at
www.elektorpcbservice.com

Ordering Instructions

Subscription Rates

Please use the Order Form at the back of this catalogue or order quickly and safely through www.elektor.com/shop. Order Forms can be sent by post or fax to our Brentford address (see page 3). Orders placed on our Brentford office must include P&P charges (Priority or Standard) as follows:
Europe: £6.00 (Standard) or £7.00 (Priority)
Outside Europe: £9.00 (Standard) or £11.00 (Priority)

Subscription Rates for Annual Subscription to Elektor

	Standard	Plus
United Kingdom	£49.00	£61.50
Surface Mail		
Rest of the World	£63.00	£75.50
Airmail		
Rest of the World	£79.00	£91.50
USA & Canada <i>For US\$-prices please check www.elektor.com/usa</i>		

Prices subject to change

The standard subscription order period is twelve months. If a permanent change of address during the subscription period means that copies have to be despatched by a more expensive service, no extra charge will be made. Conversely, no refund will be made, nor expiry date extended, if a change of address allows the use of a cheaper service. Please note that new subscriptions take about four weeks from receipt of order to become effective.

How to pay

All orders must be accompanied by the full payment, including postage and packing charges as stated above or advised by Customer Services staff.

Bank transfer into account no. 40209520 held by Elektor Electronics with ABN-AMRO Bank, London.
IBAN: GB35 ABNA 4050 3040 2095 20. BIC: ABNAGB2L. Currency: sterling (UKP).
Please ensure your full name and address gets communicated to us.

Cheque sent by post, made payable to Elektor Electronics. We can only accept sterling cheques and bank drafts from UK-resident customers or subscribers. We regret that no cheques can be accepted from customers or subscribers in any other country.

Giro transfer into account no. 34-152-3801, held by Elektor Electronics. Please do not send giro transfer/ deposit forms directly to us, but instead use the National Giro postage paid envelope and send it to your National Giro Centre.

Credit card VISA and MasterCard can be processed by mail, email, web, fax and telephone.
Online ordering through our website is SSL-protected for your security.

For USA & Canada

Orders must be prepaid. We accept checks or money orders (in US \$ drawn on a US bank only), VISA, Mastercard, Discover, and American Express credit cards. We do not accept C.O.D. orders. We also accept wire transfers. Add \$20 to cover fees charged for these transfers.
